

BONGONGO ANGUS SPRING BULL SALE

**WEDNESDAY 26TH SEPTEMBER 2018 AT 1.30PM
AT "RIVERVIEW" COOLAC NSW
THE HOME OF BONGONGO ANGUS**

GENES DO MATTER

PLEASE NOTE

We have had unfortunate delays in the Genomic results for our N bulls in this catalogue but are now available but unable to be incorporated into the Angus Breedplan until the 18th September 2018.

These updated results will be on our website the week prior to the sale and on a supplementary sheet on sale day.

Sorry for the inconvenience.

ROYAL MELBOURNE SHOW 2017

The Champion medium domestic carcass at the Royal Melbourne Show went to a 429kg live weight Angus steer exhibited by Gundagai High School and sired by Bongongo K547. Gundagai High School also exhibited a 506kg Angus steer sired by Bongongo K547, that received Reserve champion heavy domestic carcass and second place in the School Steers Bonanza.

In the Borthwick Trophy for team of three purebred steers, the Angus team placed second. An outstanding effort considering that the school have less than ten cows in their herd. Bongongo Angus lend them a yearling bull annually for joining with above average carcass traits.

ROYAL SYDNEY SHOW 2018

In the school exhibitors a steer showed by The Scots School Bathurst won the Champion Virtual Taste Carcass. This steer was given to the school by Sunnypoint Pastoral Co (Mahwood family), Oberon. And was sired by Bongongo NGX J306. Sunnypoint Pastoral Nemo S16 weighed 469kg with a very even fat cover and was fourth in his class on the hoof before being given the carcass award.

Well done to the Mahwood family as they do a 'paddock to plate' sale of their steers through their IGA supermarkets at Oberon, Grenfell and Cootamundra under the Sunnypoint Pastoral brand. It is also sold at Ashcroft's Supa IGA Summer Centre Orange, Trinity Heights and West Point IGA's Bathurst and Barkers Butchery Oberon

SPRING BULL SALE

**WEDNESDAY 26TH SEPTEMBER 2018
AT RIVERVIEW, SALE STARTS AT 1.30PM**

VENDORS:

Bill & Shauna Graham
Riverview Office: (02) 6945 3130
Bill 0428 245 208
billshauna@bongongoangus.com.au
Tom Graham 0422 050 019
tom@coolacvet.com.au

AGENT:

Elders Stud Stock, Goulburn
Steve Ridley 0407 483 108
Elders Gundagai (02) 6944 1155
Jim Saunderson 0428 441 317
Jake Smith 0400 281 347
Rob Stubbs 0417 478 886

TO VIEW THE VIDEOS OF THE SALE BULLS

The bulls in this catalogue were filmed for the sale on September 4th. We have posted these film clips on the web so you can see each animal walking and standing. Their performance data is also available with the video, which enables you to electronically search and sort the bulls. To view the film clips of the bulls, please visit our website

www.bongongoangus.com.au

VBBSE PRE SALE

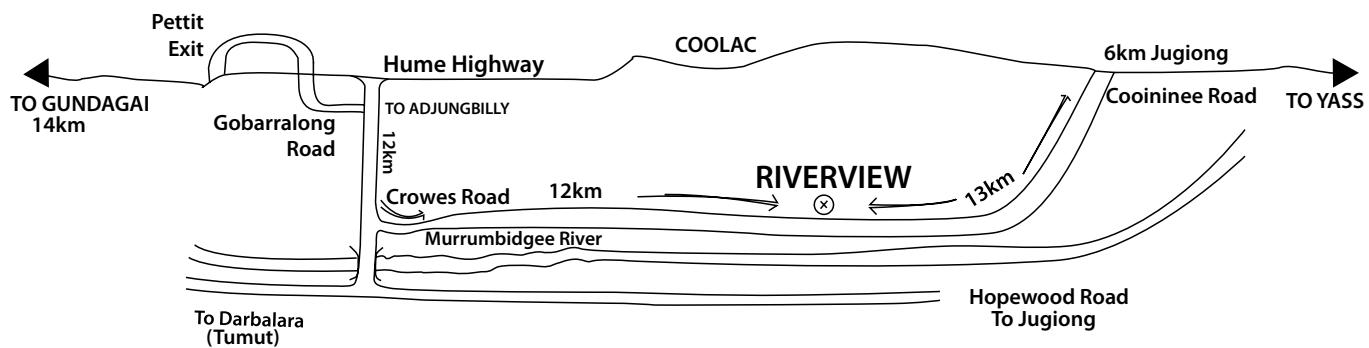

BREEDPLAN EBV'S

GENOMICS TESTED i50K

SALE LOCATION MAP

FROM GUNDAGAI

Take the left exit off Hume Highway to Pettit/Coolac then take first right to Adjungbilly and follow this road under highway, turn onto Gobarralong Rd for 12 kms. Take Crowes Rd to the left just before crossing the Murrumbidgee River, follow road for 12kms to Riverview.
Note: Do not take the Riverview Road sign stay on Crowes Road.

FROM YASS

From Yass, head towards Jugiong. Take the Cooininee Rd approximately 6kms south of Jugiong. Riverview is 13km down that road.

WELCOME TO BONGONGO ANGUS

Welcome to our 2018 Spring bull sale which marks the 92nd year of the Graham family breeding Angus cattle. We have experienced a lot drier winter this year with some softening of demand for cattle which has been dictated by more stock on the market earlier. Regular demand for young Angus breeders is an obvious signal to serious producers to capture their share of a premium market for surplus females as the number of quality breeders are down due to export sales and other breeding options especially Waygu.

Bongongo Angus is one of the oldest registered herds in Australia. Founded by the Graham brothers in 1926. H.L (Bill) and his brother Bruce Graham ran the stud from 1950. Under their guidance the herd saw a large increase in its commercial base. When H.L. (Bill) Graham died in 2012 at 90 years, his love of livestock, agriculture and family left us an indelible legacy. Generational change saw the stud pass to Bill and Shauna and their family in the late 1990's. Bill's passion for agriculture, cattle, genetics and breeding and his huge energy and enthusiasm has seen a big growth in the stud and in its bull sales. Today we have over 600 registered breeders backed up by a very large commercial herd. It was with great pride, a few years ago that we welcomed our son Tom home into the family businesses. Tom who is also a veterinarian joined his father Bill running Coolac Veterinary Services as well as working in our large dynamic family farming enterprise.

At Bongongo, we understand the key profit drivers of our commercial clients with fertility the most important. The Bongongo bulls are given rigorous pre sale Veterinary breeding soundness examination (VBBSE) followed in subsequent years by an annual VBBSE where possible. This should be a sale industry standard to maximise bull fertility and protect buyers from poor reproductive performance. All young Bongongo bulls and heifers are run in large contemporary groups, off grass and bred to perform in this cold, temperate environment.

The ability for breeders to select for key traits through ultrasonic scanning has been the single biggest development over the last twenty years giving Angus breeders an enormous benefit for carcass selection traits. Leading Angus sires that fit these criteria are used extensively through artificial breeding to improve the genetics of our herd so our clients herds do the same. The importance of marbling (IMF) is back on the agenda as the red meat sector moves through genetics and nutrition to supply improved eating quality and increased value down the chain. The consumer is becoming more educated, demanding and able to afford and our breed is in a tremendous position to take advantage of their requirements.

Those breeders that have concentrated their breeding program through consistent selection of high merit carcass bulls are in a better position to take advantage of supply chain initiatives moving forward. We finally are moving (slowly) into these potential bonuses. An often asked question when larger feedlots and others are purchasing feeder steers and heifers from Angus or Angus infused programs is "what is the source of your sires and their relevant genetics".

Over the last few years we have decided to use GENOMIC testing (Zoetis i50k test) to enhance our EBV accuracy and check the parentage of all our sale bulls. The future of breeding will involve more molecular testing through DNA. This is a great advance to develop our Breedplan EBV's into an even better world leading program.

Robert Paragreen, from Livestock Video, filmed our bulls on September 4th and can be viewed on our website.

Finally, at Bongongo we pride ourselves on our after sales service so please don't hesitate to call us if you have any problems.

Thank you for your interest and support,
Bill Graham

NOTICE TO BUYERS

INSPECTION

From 10.30am on the morning of the sale or any other time by making arrangements with Bill on (02) 6945 3130 or Tom on 0422 050 019.

REBATE

A 3% rebate will be offered to all outside agents who introduce the client in writing to the vendor at email billshauna@bongongoangus.com.au 24 hrs prior to the sale and who settle within 7 days of the sale day.

REFRESHMENTS

Morning tea and BBQ lunch (CAAB steak) compliments of Bongongo Angus, and any donations greatly appreciated for Bongongo Public School. There will be two portaloos at the sale or you are welcome to use the toilet in the homestead.

SUPPLEMENTARY SHEET

Will be available on sale day, including scrotal size measurements, weights and a map of the pens.

MOBILE PHONE SERVICE

Mobile phone coverage will be available at the sale shed via wifi calling. There will be internet service at the sale complex also. You will need to enable wifi calling on your mobile phone under settings.

HEALTH AND GENETIC TESTING

All sale cattle have been checked for general health and physical soundness. The Bongongo herd has been tested free of Mannosidosis, Brucellosis and T.B. All cattle receive an annual 7-in-1 vaccination, which includes leptospirosis. All cattle are drenched early winter for liver fluke with Fasinex 120 and wormed with Ivomec Plus or Systamex as per normal management. DNA test results will be available by sale day regarding status of any bulls that are AM or NH "in doubt" in the catalogue. The bulls are GENOMIC tested through the i50K Zoetis test. This testing increases the accuracy of Breedplan EBVs and checks the percentage. As well, any bulls requiring testing for genetic defects AM, NH, CA or DD have been tested with results in the catalogue.

BVDV PI TESTING (PESTIVIRUS)

All bulls have been tested NEGATIVE by DNA testing for BVDV (Pestivirus).

BULL FERTILITY

All bulls have undergone a bull breeding soundness examination (VBBSE) involving:

- (i) Structural soundness.
- (ii) Testicle palpation and measurement (scrotal size).

- (iii) Physical examination of internal and external genitalia.
- (iv) Vaccination against vibriosis, leptospirosis and pestivirus. All bulls have received a double vaccination with the last dose in July 2018.

MANAGEMENT

It is the policy of Bongongo to raise both stud and commercial cattle under similar conditions to those that are normal for commercial beef production. Under this system all cattle share the paddocks with sheep and supplementary feeding with hay or silage is provided under tight seasonal conditions.

VISUAL ASSESSMENT

When choosing bulls you need to use both the EBVs and visual assessment. Visual assessment is essential to assess physical and structural soundness and is a reasonable indicator of health and temperament. EBVs are a tool that will help you to make more educated decisions when you are choosing breeding stock. Do your homework well before the sale when you have plenty of time.

VIDEO AUCTION

Our bulls will be sold by video auction. The bulls will not be put through a ring instead they will be sold by auction on a large TV screen. The bull pens are very close to the sale shed. This is a growing trend in the seedstock industry and is a safer environment for all concerned. The bulls will be penned from 10.30am on sale day and we strongly recommend you allow enough time to make your selection. All lots will be sold subject to the usual conditions governing auction sales. Such conditions will be posted in the yards. The auction price will be exclusive of GST.

DELIVERY

Every effort will be made to co-ordinate delivery after the sale to minimise transport costs. Verbal instruction will NOT be accepted. Written instructions are required using the slip in the catalogue.

INSURANCE

Bulls are a valuable and vulnerable piece of farm equipment. We strongly recommend purchasers obtain immediate cover. Facilities for insurance will be available on sale day.

OCCUPATIONAL HEALTH AND SAFETY

At the sale, please do not enter pens unnecessarily and do not crowd around the bulls. No children are permitted to enter pens.

UNDERSTANDING ANGUS BREEDPLAN EBVs

What is Angus BREEDPLAN?

Angus BREEDPLAN is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. Angus BREEDPLAN uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

Angus BREEDPLAN includes pedigree, performance and genomic information from the Angus Australia and New Zealand Angus Association databases to evaluate the genetics of animals across Australia and New Zealand.

Angus BREEDPLAN analyses are conducted by the Agricultural Business Research Institute (ABRI), using software developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England. Ongoing BREEDPLAN research and development is supported by Meat and Livestock Australia.

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

Using EBVs to Compare the Genetics of Two Animals

Angus BREEDPLAN EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals in Australia and New Zealand.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to:

- ◆ the breed average EBV
- ◆ the percentile table

The current breed average EBV and percentile table is provided in these explanatory notes.

Considering Accuracy

An accuracy value is published in association with each EBV, which is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50- 74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of Angus BREEDPLAN EBVs

EBVs are calculated for a range of traits within Angus BREEDPLAN, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this sale catalogue is provided on the following pages.

BIRTH

Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.

GROWTH

200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.

FERTILITY

Days to Calving	kg	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.

CARCASE

Carcase Weight	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
Eye Muscle Area	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

FEED EFFICIENCY

Net Feed Intake (Post Weaning)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a growing phase.	Lower EBVs indicate more feed efficiency.
Net Feed Intake (Feedlot)	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

TEMPERAMENT

Docility	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
-----------------	---	---	--

STRUCTURE

Front Feet Angle	%	Genetic differences between animals in desirable front feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Front Feet Claw Set	%	Genetic differences between animals in desirable front feet claw set structure (shape and evenness of claw).	Higher EBVs indicate more desirable structure.
Rear Feet Angle	%	Genetic differences between animals in desirable rear feet angle (strength of pastern, depth of heel).	Higher EBVs indicate more desirable structure.
Rear Leg Hind View	%	Genetic differences between animals in desirable rear leg structure when viewed from behind.	Higher EBVs indicate more desirable structure.
Rear Leg Side View	%	Genetic differences between animals in desirable rear leg structure when viewed from the side.	Higher EBVs indicate more desirable structure.

SELECTION INDEXES

Angus Breeding Index	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems.	Higher selection index values indicate greater profitability.
Domestic Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade.	Higher selection index values indicate greater profitability.
Heavy Grain Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.	Higher selection index values indicate greater profitability.
Heavy Grass Index	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers.	Higher selection index values indicate greater profitability.

BREEDOBJECT \$INDEX VALUES BY CVS

"Riverview" 1188 Crowes Rd Coolac NSW 2727 • P 6945 3130 • F 6945 3156

Bill Graham BVSc • 0428 245 208 • billshauna@bongongoangus.com.au

Tom Graham BVSc • 0422 050 019 • tom@coolacvet.com.au

In November 2014, we saw a change from the old Breedobject \$index Values for Angus cattle to a new format to reflect the changes within the industry and the breed following considerable consultation with key stakeholders.

The old Breedobject Index were LONG FED CAAB, Heavy grass fed, Short fed domestic and terminal. These have been replaced by Angus Breeding Index, Domestic Index, Heavy Grain Index and Heavy Grass Index. These new index \$ values will be more representative of where our Angus breed fits the industry.

The Angus Breeding Index is a general purpose selection index that is suitable for use in the majority of commercial beef operations whereas the Domestic, Heavy Grain and Heavy Grass selection indexes are specific to beef operations targeting defined production systems and market endpoints.

The following table from the Angus society website www.angusaustralia.com.au is a good summary to improve your understanding. Other tables in this website give you more detailed information on this change such as the weightings given to the respective EBVs to make up this index and the comparison to the other indexes.

With the start of the bull selling season, it is in your best interests to update your knowledge and understanding of these changes. There has been no change to how, when and why we measure the individual traits in the field to define individual EBV traits.

Angus Breeding Index	<ul style="list-style-type: none">• Self replacing herd• Daughters are retained for breeding• Identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing systems
Domestic Index	<ul style="list-style-type: none">• Self replacing herd• Daughters are retained for breeding• Steer progeny finished on either pasture, pasture supplemented with grain, or grain targeting the domestic supermarket trade• Steer progeny slaughtered at a carcase weight of 270 kg at 16 months of age• Eating quality traits important to suit MSA program
Heavy Grain Index	<ul style="list-style-type: none">• Self replacing herd• Daughters are retained for breeding• Steer progeny pasture grown with a 200 day feedlot finishing period• Steer progeny slaughtered at a carcase weight of 420kg at 24 months of age• Targeting high quality, highly marbled markets with a significant premium for superior marbling
Heavy Grass Index	<ul style="list-style-type: none">• Self replacing herd• Daughters are retained for breeding• Steer progeny finished on pasture• Steer progeny slaughtered at a carcase weight of 340kg at 22 months of age• Eating quality traits important to suit MSA program

RECESSIVE GENETIC CONDITIONS

IMPORTANT INFORMATION FOR BULL BUYERS

This is information for bull buyers about the recessive genetic conditions, Arthrogryposis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective:

All animals, including humans, carry single copies (alleles) of undesirable or "broken" genes. In single copy form, these undesirable alleles usually cause no harm to the individual. But when animals carry 2 copies of certain undesirable or "broken" alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or "broken" genes. Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

Key point: With today's DNA tools, undesirable genetic conditions can be managed!

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by "broken" alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

Key point: The number of reported observations of AM, NH, CA and DD calves is very low and there is certainly no need for panic.

How are the conditions inherited?

Research in the U.S. and Australia indicates that AM, NH, CA and DD are simply inherited recessive conditions. This means that a single gene (or pair of alleles) controls the condition. For this mode of inheritance two copies of the undesirable allele need to be present before the condition is seen; in which case you may get an abnormal calf. A more common example of a trait with a simple recessive pattern of inheritance is black and red coat colour.

Animals with only one copy of the undesirable allele (and one copy of the normal form of the allele) appear normal and are known as "carriers".

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele), and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

Key point: For the condition to be expressed the undesirable gene needs to be present on both sides of the pedigree and both the sire and dam need to be a carrier.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

AMF	Tested AM free
AMFU	Based on pedigree AM free – Animal has not been tested
AM__%	__% probability the animal is an AM carrier
AMC	Tested AM-Carrier
AMA	AM-Affected

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an "Animal Search" from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Key point: The genetic status of an animal is subject to change and will be re-analysed and adjusted each week as DNA test results of relatives are received.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia's Breed Development and Innovation Manager at (02) 6773 4602.

Our focus is Agribusiness

We understand primary producers

As Australia's largest dedicated agribusiness bank our branch network has 61 offices all with a singular focus on financial solutions for rural businesses.

This is why we understand the unique financial needs of primary producers.

Rabobank. One focus.

Call us on 1300 30 30 33 or visit www.rabobank.com.au

STAR BREEDER PROGRAM

BUY WITH CONFIDENCE

BONGONGO ANGUS SPRING SALE

"Riverview" 1188 Crowes Rd Coolac NSW 2727

Wednesday 26th September 2018

All bulls at the sale will be STAR BREEDER program accredited. This program aims to maximise the reproductive integrity and health of stud stock.

Each STAR BREEDER certified animal at the sale has been:

- Tested to show that they are not Bovine Viral Diarrhoea Virus (BVDV) Persistently Infected (PI) animals
- Vaccinated against Pestivirus (BVDV)** to ensure they are protected from the effects of this infection
- Vaccinated against Leptospirosis**, a reproductive disease and potential WH&S risk for cattle handlers
- Vaccinated against Vibriosis**, a sexually transmitted cattle disease

You can be confident that every step has been taken to ensure these animals presented for sale will not introduce preventable reproductive diseases into your herd.

For more information talk to your Zoetis Cattle Representative, call **1800 963 847** or visit starprogram.com.au

Your Zoetis Cattle Representative is:
Peter Reardon
0438610688

WHAT A LOAD OF BULL

by Bill Graham BVSc (featured in *The Land* July 2014)

With the upcoming bull sales prior to the majority spring joining of most temperate climate herds it is a timely reminder of the important issues when purchasing your bull requirements.

It is time for the beef industry to move to best practice not the old adage "buyer beware." The progressive studs have introduced this best practice for the last two decades but it is an indictment of any bull breeder/seller not to protect your bull client's best interest when they purchase, by offering bulls that have not been subjected to a Veterinary Bull Breeding Soundness Examination (VBBSE).

The minimum requirement of VBBSE for yearling to two year old sale bulls prior to sale or being retained for your own use should be:

- Done by a veterinarian that is accredited VBBSE member
- Scrotal palpation and measurement
- Examination of external genitalia especially penis for warts, persistent frenulum, hair rings, injuries, balanitis etc.
- General physical exam including feet and legs for structure
- A negative pestivirus (BVDV) test for PI (Persistently Infected) bulls by ear notch or tail hair sample.
- Up to date vaccination history with special emphasis on VIBRIOSIS – an important vaccine to prevent a venereal disease.

Bulls that fail the test with obvious defects must be culled and not offered for sale. Bulls that are suspect may require further testing. A couple of obvious examples are:

- The bull with suspect scrotal size or poorer quality palpation requires semen testing with the use of an independent morphology laboratory to do the testing.
- Any bull that has penile surgery should be subjected to a serving ability test prior to being passed fit for sale.

The question of semen testing every bull for sale needs to be discussed with your own vet. In the southern beef temperate area there is little evidence to suggest it is necessary as a routine test. Bulls in this climate if passing the other requirements especially normal scrotal palpation and measurement above minimum standards are most unlikely to have semen quality issues. There are exceptions but our practice only identified one bull this pregnancy testing season that has failed but his crushside test was good and then failed semen morphology. We do a large load of bull breeding work and find it hard to justify the increased cost of semen testing when the majority of subfertile and infertile bulls are discovered by a thorough physical examination.

Certification with a VBBSE should be available to every bull buyer explaining what has been done to protect their investment. The importance of bull insurance for the first six to twelve months of a bull's working life was discussed last year in this publication and is worthy of your consideration.

Finally, the best investment each producer that is focused on profitability in their beef breeding business can make is to yearly test their bull battery prior to joining and before the annual bull sales so they can budget on their requirements.

What is important?

- Have a fit and capable bull battery. Do not allow your bulls to get FAT! Your bulls will last a lot longer be more agile and virile if they are not overweight. The best mature bull paddock is often your worst paddock. Young bulls need a better paddock as they are still growing.
- Check test as per the VBBSE for sale bulls.
- Do this check one to two months prior to joining is the best timing.
- If possible do a serving ability test (SAT) because as bulls age there is a greater range of problems that become obvious.

Our experience is that those farmers that apply all of the above with aged bulls achieve a yearly pregnancy test rate 5% better compared with doing nothing. One can bull budget better plus have a more even calving histogram.

DEPENDABULL + INSATIABULL IS A PROFITABULL

BUYERS INSTRUCTION SLIP

BONGONGO ANGUS SPRING BULL SALE 26TH SEPTEMBER 2018

(To be handed to the settling office immediately after the sale)

PURCHASER DETAILS:

Purchaser Name: _____

Trading Name: _____

Address: _____

Phone Number: _____ Mobile: _____

Email: _____

Property Manager or Stockman Phone No.: _____

Property Identification Code: (PIC, must be provided on day of sale): _____

DELIVERY DETAILS:

Lots Purchased: _____

Transport Arrangements: _____

ACCOUNT SETTLEMENT:

Signature: _____

Agent: Signature: _____

Date: 26th September 2018

STUD REGISTRATION TRANSFER:

Do you wish to have the Angus Society of Australia's registration of your bull transferred into your name? YES NO
Entity to which the stud stock are to be transferred:

Name: _____ Address: _____

IMPORTANT NOTICES FOR PURCHASES

~ SALE CATALOGUE DISCLAIMER ~

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

~ DNA PATERNITY VERIFICATION ~

It is a requirement of Angus Australia that all bulls used to sire calves for registration in the Angus Australia Herd Book Register, Red Angus Register or Angus Performance Register must have been DNA paternity verified if they are born in or after the 'Y' year (2003). Buyers intending to use bulls listed in this catalogue to produce calves to be registered in these registers should obtain DNA paternity verification on those bulls before they are used for breeding.

~ PRIVACY INFORMATION ~

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website.

*I, the buyer of animals with the following registration numbers
..... from member (name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the following animal(s) that I have purchased, maintaining its databases and disclosing that information to its members on its website.*

CARING FOR YOUR NEW BULL

Always be considerate to your new bull/s and handle them with respect and kindness. Handle them quietly, walk them rather than rushing them, treat them with care and in a gentle manner and they will do likewise to you.

Bulls leaving Bongongo leave the security of a large mob, and will arrive in a strange environment at the purchaser's property. When the bull/s are unloaded it is recommended you have a steer or cow as companion waiting for them in the yard.

A young bull can move in with older bulls and settle well, but remember, being the youngest, he will get the last of any feed available, because of the pecking order. The paddock needs to be reasonably large so he can keep away from the others and find adequate feed. Young bulls are still growing fast and need enough feed to maintain their growth pattern.

Bongongo bulls are used to being handled by stockmen with motorbikes, utes, dogs and horses. We pay utmost attention to bull temperament as being a critical trait.

When your new bull is joined to your females, inspect him at least weekly to ensure he is walking freely and his penis looks normal. If there is a problem take him out of the mob and contact your vet. Early treatment is vital. If you have any questions regarding the bulls, the progeny etc. please let us know.
